Acknowledgments

This grammar of Komnzo started out as my PhD project at the Australian National University in Canberra. Since 2016, there have been many additions and revisions to this grammar, but the majority of the contents are the same as in the final version of my dissertation. These changes are the result of the comments given by reviewers, editors and proof-readers as well as the ever-increasing knowledge I receive from my Komnzo speaking friends.

This book would not have been possible without the support of the Farem people who took on the task of teaching me their language. I am deeply grateful to them for welcoming me in their community, for feeding me and keeping me safe at all times, for the patience they have had with my probing questions, and above all for sharing their language and culture with me. It is impossible to acknowledge everyone who assisted in teaching me Komnzo, for every exchange provided a contribution to my knowledge. Amongst my indigenous teachers were: Abia Bai, Nakre Abia, Daure Kaumb, Riley Abia, †Marua Bai, Lucy Abia, Sékri Karémbu, Janet Abia, Steven Karémbu, Caspar Mokai, Karo Abia, Kaumb Bai, Moses Abia and Albert Mokai.

My principal supervisor Nicholas Evans first suggested the Tonda languages as an area of research. Nick's enthusiasm and challenging criticism has helped me to sharpen my analysis and description of Komnzo. His open-mindedness about fieldwork and his holistic approach to language documentation made me see fascinating details of the language. I have greatly appreciated the contributions of I Wayan Arka, Andrew Pawley, Mark Ellison and Mark Donohue, who took over supervision at various periods over the years. I thank Ulrike Mosel, Ger Reesink and Martin Haspelmath for reviewing the dissertation. Their positive as well as their challenging comments have greatly improved this grammar. I am indebted to the administrative staff at the School of Culture, History and Language who have helped me navigating the bureaucracy. I would like to thank Jo Bushby, Penelope Judd, and Stephen Meatheringham. I am grateful to Kay Dancey at cartographic unit for the linguistic map of the Morehead district (see Figure 1.1).

There are a number of people who have helped me with specific knowledge and advice concerning virtually all aspects of carrying out research in the Morehead district. I would like to thank Mary Ayres who invited me to her house in Philadelphia and shared her fieldnotes from Rouku. Paul O'Rear and Risto Sarsa have answered many questions and requests about Rouku and Yokwa. Thanks also to Garrick Hitchcock and Kevin Murphy for sharing their knowledge about and experience in working in this part of the country. I also thank Jeff Siegel for his help both in Morehead and in other places where we have met. I want to thank Cezar Fernandez and the staff of New Century Hotel in Daru, who continue to make my brief stays in this town a pleasant experience, and Douglas Dawi,

Acknowledgments

Andrew Little, Peter Paradi, and Charlie Subam for transporting me and my equipment safely between Daru and the Morehead district.

Over the years, I have received financial support from the DOBES project of the Volkswagen Foundation, the Stephen and Helen Wurm Bequest at ANU, The Max Planck Institute for Evolutionary Anthropology and the ACR Centre of Excellence for the Dynamics of Language at ANU. I thank all these institutions for making language documentation and description possible. I thank especially Vera Szöllösi-Brenig for organising the DOBES project, as well as Paul Trijlsbeek, Han Sloetjes and Alexander König for providing technical training and assistance.

I thank the staff at Language Science Press, especially Sebastian Nordhoff and Martin Haspelmath. Moreover, I am grateful to the numerous volunteers who spent their valuable time during the publication process of this book. I embrace you in the spirit of true open-access publishing.

To my family and friends who have provided me with moral and practical support over the years, I am deeply grateful. Too many years and too many people have passed by to thank everyone, but particular thanks go to Darja Hoenigman, Aung Si, Charlotte van Tongeren, Sebastien Lacrampe, Penny Johnson, Gary Kildea, Matthew Carroll, Beth Evans, Alena Witzlack-Makarevich and Sonja Riesberg. Lastly, I want to thank my parents Regina and Jörg, my brother Matthias and his family for their continued support over the last years.

6 Tense, aspect and mood

6.1 Introduction

Tense, aspect and mood is the most complex set of grammatical categories in the verb inflection, both in the way the categories are encoded and in the number of distinctions that can be expressed. Morphologically, there are 18 categories, which may be supplemented by a set of TAM particles. There are four morphological tense values (non-past, immediate past, recent past and past), four aspect values (perfective, imperfective, durative and iterative) and three mood values (indicative, imperative and irrealis).

I will begin this section with an overview of the morphological material that is involved in TAM inflection. Most of these building blocks and the idiosyncrasies in their behaviour have been addressed in the preceding chapter and I will refer to these sections where appropriate. In the following, I will focus on the combinatorics of the morphemes and stems (§6.2), the impact of clitics and particles (§6.3) and the semantics of the resulting TAM categories (§6.4). Aspect in Komnzo can at best be somewhat misleadingly captured with the traditional definition of perfective versus imperfective, which is often based on the completion of an event. Although I employ these labels, it should be noted that the perfective focusses more on the left edge of the event (inceptive) or expresses a momentaneous quality (punctual). With that in mind, I defer the discussion of the semantics of TAM to the end of this chapter (§6.4).

6.2 The combinatorics of TAM

The most basic element of TAM inflection is the distinction between an extended (EXT) and a restricted stem (RS). Both types are attested for almost every verb lexeme (§5.3). EXT and RS stems differ in their templates with respect to dual marking (§5.3.2) and in the possible combinations with the five prefix series α , β , β_1 , β_2 and γ (§5.3.3). In addition to the five series, the irrealis prefix *ra-* and the immediate past proclitic *n=* are involved in TAM marking. The suffixal material includes a past suffix (*-a*) and a durative suffix (*-m*) and a special actor suffix series for the imperatives. Table 6.1 gives a full overview of the TAM categories and the way these are built up from the listed morphological material. An important distinction in the verb template, not expressed in Table 6.1, is the difference between post-stem dual marking with EXT stems and pre-stem dual marking with RS stems. This was described in detail in §5.5.3.

The combinations in Table 6.1 illustrate a feature of Komnzo morphology that reverberates throughout the verb inflection: the distribution of exponents. In other words,

a grammatical category is encoded and manipulated by formatives that are scattered across the verb template. On the flip side of this phenomenon, most formatives lack a clear grammatical meaning, or have multiple grammatical functions depending on the combinatorics. Thus, they have to be glossed in an abstract manner. However, there are degrees of morpheme underspecification. For example, two morphemes in Table 6.1 can be assigned an unambiguous grammatical meaning. These are the irrealis prefix *ra-* and the past suffix *-a*. The *-a* morpheme only occurs in past tense inflections, and the label PST is a sufficient gloss for the *-a* suffix. However, the *a-* suffix is insufficient to describe the tense value “past” because other morphs, e.g. the prefix series, are required to form a past tense. A second group of morphemes is underspecified in the following way: they fulfil several functions, either simultaneously or in different morphological contexts. For example, the durative suffix *-m* encodes durative aspect, but it also “pushes back” the tense value. Thus, when suffixed to a non-past (imperfective), it will produce a recent past (durative), and when suffixed to a recent past (imperfective), it will produce a past (durative). One option would be to label it durative/backshifting suffix. However, in imperatives the *-m* suffix pushes the tense values “forward”, producing a delayed imperative (‘do X a little later’), and duration is not part of its meaning. Furthermore, the *-m* suffix may occur with perfectives as a means of backgrounding an event, again without encoding duration. Thus, the choice of the glossing label (DUR) for the *-m* suffix is somewhat arbitrary, and we could just as well label it “tense shifting” or “backgrounding”. For a third group of morphemes, especially the five prefix series, all attempts to assign a grammatical meaning to them is futile and we have to draw on abstract labels like α , β and γ .

Not all logically possible combinations of morphs are grammatically acceptable. For example, the α and γ prefix series only combine with EXT and RS stems, respectively, but not vice versa. Likewise, the past suffix *-a* and the durative suffix *-m* are mutually exclusive and a verb form with both is rejected as ungrammatical. Third, the irrealis prefix *ra-* only combines with the β prefixes and not with the other prefix series. Lastly, the immediate past clitic *n=* can only attach to a verb form which employs the α prefix series, not to the other combinations. We can conclude from this observation that the combinatorial space is not fully exhausted, i.e. not all logically possible combinations of the morphological material are actually employed. Such a system is not surprising because all natural languages evolve incrementally without an overall design. What is remarkable about Komnzo in particular and the Yam languages in general is the fact that so many combinations are employed. In other words, the genius of the verb morphology lies in its extensive exploitation of combinations.

In the following section, I will describe the functions and some of the distributional characteristics of the morphemes in Table 6.1.

Table 6.1: The combinatorics TAM marking

TAM value	clitic $n =$	prefix series $\alpha, \beta, \beta_1, \beta_2, \gamma$	IRR prefix $ra-$	stem type		TAM suffix		imperative suffix	
				EXT	RS	PST (-a)	DUR (-m)	IMP/2SG(-e)	2NSG-e
non-past		α		EXT					
immediate-past	$n =$	α		EXT					
immediate-past	$n =$	α		EXT			-m		
recent-past		β_1 or β_2		EXT					
recent-past		α		EXT			-m		
recent-past		γ		RS					
past		α		EXT			-a		
past		β_1 or β_2		EXT			-m		
past		γ		RS			-a		
past		β_1 or β_2		RS					
past		β_1 or β_2		RS			-m		
past		β		EXT					
n/a		β	$ra-$	EXT					
n/a		β	$ra-$	EXT			-m		
n/a		β	$ra-$	RS					
n/a		β		EXT				IMP	
n/a		β		RS				IMP	
n/a		β		EXT			-m	IMP	
future		β		RS			-m	IMP	

6.2.1 The prefix series

The five prefix series α , β , β_1 , β_2 , γ were briefly addressed in §5.5.1.4. The table from page 216 is reproduced as Table 6.2.

Table 6.2: TAM prefixes

gloss	α	β	β_1	β_2	γ
1SG	wo-	kw-	ku-	kwof-	zu-
1NSG	n-	nz- / nzn-	nzu-	nzf-	nzn-
2SG	n-	nz- / gn-	gu-	gf-	nzn-
3SG.F	w-	z-	zu-	zf-	z-
3SG.MASC	y-	s-	su-	sf-	s-
2 3NSG	e-	th-	thu-	thf-	th-
M	η-	k-	kw-	kf-	z-

The α prefixes combine only with the extended stem. They are used to encode non-past (1), recent past durative (2) and past imperfective (3). Example (1) comes from a hunting story, where the narrator meets a spiritual being in the forest. In (2), the speaker reports an incident from a neighbouring village involving a young boy who was attacked by a sorcerer in his yam garden. Example (3), is from an interview about the customs around the sister-exchange marriage system.

 2|3PL:SBJ>1SG:IO:PST:IPFV/dance
 ‘They danced three times for me.’ [tci20120805-01 ABB #769]

If the proclitic *n=* is attached to a verb employing the α prefixes, the resulting inflection is either immediate past imperfective (4) or immediate past durative (5) depending on the suffixal material. In other words, the immediate past is built from verbs inflected for non-past. This is preserved in the integrated glossing style, because the *n=* is analysed as a clitic. The *n=* is related to the imminent particle *n* (§6.3.1). Example (4) sums up a story about the origin of the Morehead people. In (5), the speaker talks about competitive yam cultivation and how older people assess a young man's status by the number and size of his crop.

 [tci20120805-01 ABB #378-380]

The β series is split into a basic series β and two related series β_1 and β_2 . The basic β series is used for all the non-tensed categories like the irrealis (6) and the imperatives (7). Example (6) comes from a procedural text about fish baskets and the speaker explains how the fish gets trapped inside. In (7), the narrator took over the role of a character in a stimulus picture task.

Table 6.2 shows that there are two formatives for the first person non-singular (*nz-* and *nzn-*) as well as the second singular (*nz-* and *gn-*) of the *β* series. For the first person non-singular, *nz-* is used for irrealis (8) and *nzn-* for the imperatives (9). In example (8), the speaker explains how a kundu drum is carved and prepared. Example (9) is taken from a conversation by the fire that involved a lot of hearsay information. In conclusion, the speaker tells the two addressees to go to Morehead and clarify the rumours.

 2DU:SBJ>1DU:OBJ:IMP:PFV/tell
 ‘You come back and tell us about it!’ [tci20130901-04 RNA #162]

For the second person singular, the situation is more complicated. The *gn-* formative is used for the imperatives of prefixing verbs, where the prefix encodes the imperative mood and the addressee simultaneously (10). The second non-singular prefix is *th-* for all inflections that involve the *β* series. Note that for ambifixing verbs in the imperative, there is no overt marking of second person in the prefix because this would then be reflexive (‘X yourself!’) or auto-benefactive (‘X for yourself!’). As pointed out in §5.4.5, reflexives and auto-benefactives are expressed in a middle template. Hence, the first verb in example (9) could be translated as a reflexive (‘return yourselves!’).

- (10) *ezi gnyako!*

 2SG:SBJ:IMP:IPFV:AND/walk
 ‘You go there in the morning!’ [tci20120906 MAB #31]

The second formative for the second singular in Table 6.2 (*nz-*) is used for irrealis inflection of prefixing and ambifixing verbs. Interestingly, only the second person singular of ambifixing verbs does not employ the irrealis prefix *ra-* in the irrealis inflection (11). If

it is a prefixing verb, the irrealis prefix *ra-* is employed (12).¹ Example (11) is taken from a procedural text in which the speaker shows me how to manufacture two children's toys. In (12), the malignant protagonist invites a stranger to stay with her.

¹Both verbs in this example are deponent employing, the valency change prefix *a-* without a change in valency. The second verb *yak* 'walk' is only deponent when it employs the venitive marker, meaning 'come', not when it is neutral or anadative 'walk', 'go away'.

These two prefix series are derived from the β series by adding an element to it. For β_1 , this is the vowel /u/ and, for β_2 , it is the consonant /ɸ/. The only exceptions are the first person singular and the second person singular formatives (see Table 6.2). In a different analysis, the /u/ and /ɸ/ elements could be described as separate morphemes. Like the prefixes, these two morphemes would then have to receive an abstract label. Such an analysis would reduce the number of prefix series to three. Under the current analysis, there are three main series and two subseries. I retain the current analysis, but I do not see either as being more elegant or more parsimonious than the other. More important is the question regarding the difference between β_1 and β_2 , which, for the moment, is unsettled. I will briefly discuss two possible explanations.

First, the difference might be understood in terms of sociolinguistic variation, i.e. the use of either variant is determined by an individual's linguistic biography. Although all Komnzo speakers are multilingual, the strongest influence comes from two close varieties, namely Wära and Anta. In my preliminary survey of the surrounding varieties, I found that β_1 and β_2 exist in Wära as well as Anta. My impressionistic view is that the β_2 prefix series occurs much more frequently than β_1 . However, comparative work and documentation on both varieties is needed.

A second explanation is a true difference in meaning. Although β_1 and β_2 are almost always interchangeable without a clear change in meaning, there are some hints that semantics may play a role. For example, the copula can only take β_2 and not β_1 , and the same is true for the verb *yak* 'walk' (13). Only when the copula is used in an ambifixing template, both β_1 and β_2 are possible. However, in an ambifixing template the copula cannot be translated as 'be', but instead functions as a light verb with the meaning 'do'. For other verbs, β_1 and β_2 are interchangeable. This observation leads me to believe that the β_2 prefixes encode either a longer duration of the event or a greater degree of affectedness of the participants. However, targeted elicitation and close observation of natural texts did not lead to a clear pattern along these lines. Informants found it hard to give a characterisation or translation of the difference and often contradicted each other or themselves. For now I will leave this question open for future research.

The γ prefixes are used for the perfectives: the recent past perfective (15) and the past perfective (16). Example (15) comes from a spontaneous conversation in the yam garden when a friend happened to pass by on his bicycle. Example (16) describes a dance that took place in the nearby settlement of Forzitho.

6.2.2 The irrealis prefix *ra-*

The irrealis prefix *ra-* is used for the imperfective, perfective and durative irrealis inflections. We have seen examples of all three aspect values in (11) and (12). Example (11) showed that the only place in the paradigm where the irrealis prefix *ra-* is not used is the second person singular of an ambifixing verb.

The interaction of the irrealis prefix with the valency changing prefix *a-* and pre-stem dual marking is explained in §5.5.3.4. In that section, I pointed out that the irrealis prefix *ra-* overrides the valency changing prefix *a-* to the effect that the absence versus presence of the valency changing prefix is neutralised. For verb forms which employ the extended stem, this neutralisation is complete. For verb forms which employ the restricted stem, there are small changes in the pre-stem duality marking pattern (§5.5.3.4). In these cases, only the case frame indicates whether the undergoer argument is a direct object, such as the absolutive case on *szsi* ‘calling’ in (17), or an indirect object, such as the dative case on *ηatha* in (18). Both examples are taken from the same hunting story in which the narrator talks about his usual routines when going on a hunting expedition.

6.2.3 The past suffix *-a*

The position of the past suffix *-a* within the suffixing subsystem is described in §5.5.1.1. The past suffix *-a* is employed for two TAM categories: the past imperfective (19) and the past perfective (20). Example (19) is taken from a text on oral history of the Morehead district. The narrator talks about conflicts caused by an alleged sorcerer in the 1940s. The second example (20) comes from a much more recent event, where a woman is talking

about camping at the Morehead river and going fishing only a week before the recording was made.

 [tci20120922-25 ALK #7-8]

6.2.4 The durative suffix -m

The durative suffix -m is described in §5.5.1.1 with regard to its position in the suffixing subsystem. It is employed for durative aspect, which expresses an ongoing event in the immediate past², recent past (21), past (22) and irrealis (23). In example (21), the speaker reports on how he fought a bushfire in his garden the preceding day. Example (22) is taken from a story about rain-making magic which the narrator acquired and practiced in his youth. The irrealis example (23) is taken from a conversation about local customs surrounding the sister-exchange system.

- (21) *wthzak zane ɲanrsirwrmth.*

 exchange.man when M.β-IRR.VC-argue.EXT-DU-DUR-2|3NSG (.) exchange.man
 2|3DU:SBJ:IRR:IPFV/argue

²The immediate past occurs with a low frequency in the text corpus and, consequently, there is only a handful of examples in the immediate past durative. Example (5) on page 241 is one of these.

fäms=nzo (.)
 exchange.man=ONLY (.)
 ‘When exchange men are fighting ... exchange man (against) exchange man ...’
 [tci20120805-01 ABB #460]

Part of the function of the durative suffix is to shift back the tense. If we remove the *-m* suffix from a verb inflected for the recent past durative (21) or past durative (22), the resulting form would be a non-past imperfective and recent past imperfective, respectively. Figure 6.1 shows this with the verb *songs* from example (22).

Figure 6.1: The backshifting function of the durative suffix *-m*

The durative suffix can also attach to an iterative inflection, in which case the iteration of the event is stretched over a longer duration, as in (24) and (25). In (24), the speaker talks about the first fire which destroyed the world inhabited by humans. In (25), the speaker describes how the people used to avoid a particular place during the early and late hours of the day because it was inhabited by a story man.

- (24) *zft̥h mni nã kayé zwäsmth kidn.*

 PROX=2|3PL:SBJ:NPST:IPFV/be
 ‘They were waiting until the sun always reached highest point and then they paddled here.’ [tci20120922-19 DAK #13]

The durative suffix *-m* can be suffixed to perfective verbs in the recent past, past and irrealis. In this case, the event is only backgrounded without encoding a longer duration.

However, these inflections are so rare that, at least for the recent past and past tenses, they are not attested in the corpus. For the irrealis perfective with the durative suffix, there are a handful of examples. In (26), the speaker talks about an old procedure for punishment which involved striking the culprit with a yam tuber over the head.³

- (26) *nasime srākwrnth ebaren “ah, miyatha kākor bā monwā zbrigwé!”*
 nasi=me s-rā-kwr-m-th ebar=en ah miyatha
 long.yam=INS 3SG.MASC.β-IRR.ND-hit.RS-DUR-2|3NSG head=LOC ah knowledge
 2|3PL:SBJ>3SG.MASC:OBJ:IRR:PFV:BG/hit
 k-ā-kor-Ø bā mon=wā z-brig-w-é
 M.β-ND-become.RS-2SG.IMP 2.ABS how=EMPH 3SG.F.β-return.EXT-ND-2SG.IMP
 2SG:SBJ:IMP:PFV/become 2SG:SBJ>3SG.F:OBJ:IMP:IPFV/return
 ‘They would hit him on the head with the long yam (and say) “Now you come up
 with a plan to pay this back!”’ [tci20120805-01 ABB #236-240]

Irrespective of perfectivity, the durative suffix on any irrealis inflection can have a far future interpretation. In examples (27) and (28), it is clear from the context that the event is set in the future and the *-m* on the verb indicates that the event is further in the future (as opposed to an irrealis form without the *-m* suffix). In (27), the speaker showed me an old method of tying a bowstring. He then speculates whether and when these old practices will vanish. Example (28) is taken from a conversation about yam cultivation during which the speaker complains about young people’s lack of interest in gardening.

- (27) *ni miyamr mā kwa krābth mane ... mrnen krābthmo frthé*

If the durative suffix is attached to a verb in the imperative mood, it encodes a delayed or future imperative (‘do X a little later!’).⁴ The future imperative is also a rare inflection,

³I will show the backgrounded status of the perfective verb in the unified gloss line with BG, as in the examples below. In the maximally segmented gloss line, I will continue to use the durative label DUR.

⁴I gloss the future imperative with FUTIMP in the unified gloss line.

and we have seen one text example in (5) on page 241. In example (29), the speaker describes how competitive yam harvesting took place in the old days. After harvesting and sorting, a piece of rattan was used to measure the size of the largest tubers. This measurement was then sent to the competitors as a sign of one's superior gardening skills.

6.2.5 The imperative suffixes

The formatives of the imperative actor suffix series were given in Table 5.8 on page 210, where I pointed out the syncretism with the first person indicative actor suffixes and the second person imperative suffixes, as well as the fact that the second singular suffix differs between perfective and imperfective imperatives. I refer the reader to section §5.5.1.1 for further information.

Here I describe the morphology of imperatives for the prefixing template. Prefixing verbs as defined here encode their single participant in the prefix. We saw in Table 6.2 on page 240 that imperatives are formed with the β prefix series. For prefixing verbs, the formatives are *gn-* (2SG.IMP) and *th-* (2NSG.IMP). A further suffix is added to prefixing verbs only. Consider example (30) in which the speaker quotes himself talking to his wife. The imperative inflected verb is marked with an -é suffix which resembles the actor suffix of an ambifixing imperfective imperative (2SG.IMP) or of an ambifixing indicative of any aspect class (1SG). In the morphological context of prefixing imperatives, this -é does not encode a person value, as can be seen in example (31) where the number of the addressee argument is plural. In other words, the -é suffix looks like a person/number suffix, but with prefixing verbs it is inert to those categories and it only encodes imperative mood.

- (30) *bä znrä. zä gnamnzé kwot e nzä kränbrimé!*
 bä z=n-rä zä gn-a-m-nz-é kwot e nzä
 2.ABS PROX=2SG.α-COP.ND PROX 2SG.β-VC-sit.EXT-ND-IMP properly until 1SG.ABS

 2|3PL:SBJ:IMP:IPFV/walk
 ‘You (boys) who go hunting at night must be careful!’ [tci20130901-04 RNA #27]

The -é formative for imperatives, regardless of whether it occurs on prefixing or ambifixing verbs, shows the same idiosyncrasies as the first person singular suffix -é, which is described in §5.5.1.1. For example, it disappears when other suffixes are added, as we saw in example (10) on page 242, where the -é suffix does not appear because of the andative suffix -o.

6.3 The TAM particles

The rich system of TAM categories in Komnzo can be further supplemented by a set of preverbal particles. These include the future *kwa*, the habitual *nomai*, the potential *kma*, the iamitive *z*⁵, the apprehensive or prohibitive *m* and the imminent *n*. The latter two are related to the deictic proclitic *m*= and the immediate past *n*=. These particles interact with the numerous TAM categories and there are only few limitations on the possible combinations.

6.3.1 The imminent particle *n*

The imminent particle *n* expresses the point in time just before the event takes place, usually without implying that it actually happened. This often gets translated by informants as ‘try to do X’ or ‘be about to do X’. Both interpretations, the intentional and the imminent one, are possible and difficult to separate. In example (32), the speaker showed me how to weave a fish basket. He says that he will try and fetch me when the work is finished because he does not know whether or not it will be successful.⁶

- (32) *n thrma nzänmesé ... fthé zrābthé zane kafar.*

 zane kafar
 DEM:PROX big
 ‘Later I will try and fetch you, when I have finished that big (basket).’ [tci20120906 SKK #18]

The imminent particle can occur with inflections of different TAM categories. The important part of its semantic contribution is twofold: (i) the point in time before the event and (ii) the fact that the action has not yet been carried out or – in most cases – is

⁵I adopt the term *iamitive* from Olsson (2013), who has coined the term based on Latin *iam* ‘already’.

⁶Indeed, he never came and showed me the finished fish basket because I had already left the village. But he proudly presented it to me in the following year.

not or was not carried out. Example (33) is taken from a headhunting story in which two men are about to kill a young woman when they realise that the rest of their headhunting party has left already.⁷

- (33) *n zfrnmth di kam garsir “awkwot! ngemäku, kabe matak erä!”*

 2|3PL:SBJ:NPST:IPFV/be
 “They were about to break her neck. (He said:) “Oh no, my friend, all the people
 have left!””

There is an overlap in the semantics of the proclitic *n=* which encodes immediate past and the imminent particle *n*. I pointed out earlier that the immediate past clitic attaches to a verb which is otherwise inflected for non-past. Thus, it marks a point in time immediately before the present. The particle *n* occurs in front of verb forms of different TAM categories, marking a point in time immediately before the event. The semantic difference is in the implication as to whether or not the event was actually carried out. In the case of the immediate clitic, the event has happened, but with the particle *n* this is not the case. The difference between the two also lies in formal criteria. The particle *n* is syntactically independent in that it occurs free (32), or occur directly in front of the verb, where it is hard to say whether it is a proclitic or an independent element (33). On the other hand, the immediate clitic *n=* is always bound to the verb.

Speakers of Komnzo who have been brought up in a Wära-speaking family, and most young speakers of all backgrounds, have replaced the immediate past proclitic *n=* with its Wära equivalent *nz=*. This change only affects the proclitic and not the imminent particle *n*.

6.3.2 The apprehensive particle *m*

I point out in §5.6.2 that among the deictic proclitics there is one with a limited distribution. The *m*= proclitic can only attach to the copula, in which case it turns the clause into a question ('where is X?').⁸ See example (70) on page 235. The *m* particle shows more syntactic flexibility as it can procliticise to the verb as *m*=, encliticise to the potential particle in the combination *kma*=*m* or occur by itself. The latter is only attested through elicitation and there are no corpus examples of independent *m*. Nevertheless, it can be classified as a particle and a clitic.

The particle *m* functions as an apprehensive marker. It is attested in the corpus with irrealis, imperative and perfective forms. Example (34) is from a story about a man who

⁷The word *ngemāku* in the example is an address term between two people where one has adopted the child of the other.

⁸I will gloss *m* as interrogative (where=) when it attaches to the copula. I will gloss it as apprehensive (APPR) in all other cases, including the cases where *m* and the potential particle *kma* express a prohibitive.

mocked a crowd of dancers by threatening them with a matchbox. They were afraid, as they did not know about matches and lighters.

 ‘They said: “Grab him! Hold him! He might ignite the Kidn fire. (That is) when we
 will all burn.”’ [tci20120909-06 KAB #82]

In these cases, the particle *m* seems to override the TAM value of the verb. In (34), the verb is in the recent past but lacks a therecent past reading. Likewise, I often heard the warning *mkätr*⁹ ‘(watch out) you might fall!’, where *m* is attached to an imperative form, but lacks an imperative reading. Naturally, if *m* occurs with an irrealis form, there is no such conflict. Example (35) is taken from a story about a bushfire. The speaker explains how he set a small controlled fire in order to stop the wild bushfire from spreading.

- (35) *we ane nzefé zaföfé ... we mkrärit we fafä.*
 we ane nzefé z-a-föf-é (.) we
 also DEM 1SG.ERG.EMPH 3SG.F.γ-VC.ND-burn.down.RS-1SG (.) also

 APPR=M.β-IRR.VC.ND-pass.RS-2|3SG also after.that
 APPR=2|3SG:SBJ:IRR:PFV/pass
 ‘I also burned down this (grass) ... (the fire) might cross over later.’
 [tci20120922-24 MAA #30-31]

If *m* occurs with an imperative inflected verb and the potential *kma*, it functions as a prohibitive. Example (36) is from the very beginning of a hunting story. The speaker tells his son to be quiet during the recording, while I am setting up the microphone.

- (36) *zokwasi wzänzr ... daddyf. kmam kanafré!*
 zokwasi w-zä-nzr-Ø (.) daddy=f kma=m

2SG:SBJ:IMP:IPFV/speak

‘Daddy is recording the words. You must not talk!’

[tci20130903-03 MKW #3-4]

In the prohibitive construction, the particle *m* is rather flexible. It can attach to the verb as a proclitic (37) or to the potential particle *kma* as an enclitic (36 and 38). What is important for the prohibitive reading is the co-occurrence of *m* and *kma* in the clause, not the fact that they are conjoined. Example (37)¹⁰ comes from a public speech at a dance in which the speaker tells the audience the rules for the night. Example (38) is taken from a text about food taboos.

- (37) *kma wäriṛ bā mgnanyaké zena zbär zbo!*

2SG:SBJ:IMP:EXT/mix

‘You must not mix it with coconut’

[tci20120922-26 DAK #12]

6.3.3 The potential particle *kma*

The potential particle *kma* can be employed with almost all TAM categories. We saw in §6.3.2 that it encodes a prohibitive when it occurs together with imperatives and the apprehensive particle *m*. This is the only construction in which *kma* and the imperative inflections occur together.

The potential particle *kma* is used to encode various types of speculation and counterfactuality with deontic or epistemic interpretation. Example (39) is taken from a public speech at a dance, where the guest side has brought too many people, and consequently the host side found it impossible to meet the needs of so many people. The speaker regrets that no proper arrangement has been made prior to the event. Thus, the clause “it should have been well” has a clear deontic reading.

- (39) *namä kma nimame zrarenzrm fof... fthé namä yamme nüfthakwrme.*

namä kma nima=me z-ra-re-nzr-m

fof (.) fthé namä

good POT like.this=INS 3SG.F.β-IRR.VC-look.EXT-ND-DUR EMPH (.) when good

3SG.F:SBJ:IRR:IPFV/look

¹⁰The verb *yak* ‘walk’ is deponent and employs the valency change prefix *a-* without a change in the valency of the verb. It is only deponent when it employs the venitive marker, meaning ‘come’, not when it is neutral or andative, meaning ‘walk’, ‘go away’.

6 Tense, aspect and mood

yam=me n=w-fifthak-wr-m-e

 2|3PL:SBJ:IRR:IPFV/grow
 ‘The sprouts will grow from here.’ [tci20120805-01 ABB #35]

The future particle can also be used by itself meaning ‘wait’, as in example (43), where the name of a particular plant has slipped from the speaker’s mind.

- (43) *kwa! yf kwot keke miyatha worä.*
 kwa yf kwot keke miyatha wo-rä
 wait name properly NEG knowledge 1SG.α-COP.ND
 1SG:SBJ:NPST:IPFV/be
 ‘Wait! I don’t quite know that name.’ [tci20130907-02 RNA #609]

When negated, the future particle *kwa* can express ‘not yet’, as in example (44), where the speaker points out that he has not yet heard the name that will be given to a particular person at an upcoming namesake celebration.

- (44) *ni miyamr mane zrarä ane kar yf fof. keke kwa kar yf nä zamare fof.*
 ni miyamr mane z-ra-rä ane kar yf fof keke kwa

 1PL:SBJ>3SG.F:OBJ:RPST:PFV/see
 ‘We do not know which local name it will be. We have not heard the name yet.’
 [tci20110817-02 ABB #58-60]

Younger speakers of Komnzo are beginning to use the Wära equivalent *ka*, which which has a pure velar rather than labiovelar onset.

6.3.5 The iamitive particle *z*

I adopt the term “iamitive” from Olsson’s (2013) comparative study of particles that express a perfect. Reesink (2009: 184) uses the term “perspectival aspect”, which he adopts from Dik (1997). Komnzo speakers often translate the iamitive particle *z* as ‘already’, hence the gloss label ALR. An introductory example is given in (45). This is taken from a recording where two women took me on a plant walk. Example (45b) is the answer to the question in (45a).

- (45) a. *zuyak z safäs?*
 zuyak z s-a-fäs-Ø
 zuyak ALR 3SG.MASC.γ-ND-show.RS-2|3SG
 2|3SG:SBJ>3SG.MASC:OBJ:NPST:PFV/show
 ‘Have you shown him zuyak (Rhodania sp) already?’
 [tci20130907-02 JAA #44]
- b. *z fof!*
 z fof
 ALR EMPH
 ‘Yes, (I have) already.’
 [tci20130907-02 RNA #121]

Example (45) shows that the function of the iamitive is to express “current relevance” of some past event. Consequently, the particle may combine with verbs inflected for different TAM categories. Example (45) shows a verb in recent past perfective. In (46), the iamitive particle is used with a past durative inflected verb. This combination is rarer, but well-attested in the corpus. In the example, the speaker is explaining which clans settled at which locations. He points out that his clan had already been living in Masu for a while.

- (46) *fi fobo thwamnzrm nima ... ni masun z nzwamnzrm.*
 fi fobo thu-a-m-nzr-m nima (.) ni masu=n z
 3.ABS DIST.ALL 2|3NSG.β1-VC-sit.EXT-ND-DUR like.this (.) 1NSG masu=LOC ALR

1NSG.β1-VC-sit.EXT-ND-DUR

1PL:SBJ:PST:DUR/sit

‘They lived over there, this way ... and we had already been living in Masu.’

[tci20120922-08 DAK #97-98]

The iamitive particle can also be used with a non-past inflection. This is often restricted to interrogatives, as in (47), where the speaker is asking a crowd of people whether they can hear him speaking.

- (47) *zbär bā zagrwä ämnzro. z wanrizrth?*

zbär bā zagr=wä e-a-m-nzr-o z

night MED far=EMPH 2|3NSG.α-VC-sit.EXT-ND-AND ALR

2|3PL:SBJ:NPST:IPFV:AND/sit

w-a-n-riz-r-th

2|3PL:SBJ>1SG:IO:NPST:IPFV:VENT/hear

‘Tonight you are sitting too far away. Can you hear me?’

[tci20121019-04 SKK #9]

The iamitive particle additionally expresses the completion of an event. Evidence for this come from different observations. First, it can express a current relevance meaning. Secondly, it never combines with iterative verbs, which express an ongoing repetition of some event in the past. Thirdly, it marks sequentiality of events in some narratives where the verb form which combines with it seems to be almost a prerequisite to the following verb. Example (48)¹¹ is a description of a path, which the speaker had taken the previous day. He describes the sequenced stages of his path to the location called Tüngo.

- (48) *bā komnzo zwāzik ... ksi karen z kwanyak e zbo zwānthor tūngo.*

‘It turned off (the path) there ... I walked in the bushy place until I arrived here in Tüngo.’

[tci20120922-24 MAA #8-10]

The iamitive particle *z* in *Komnzo* shares a number of semantics characteristics with the forms described by Olsson (2013) in his comparative study. The main two characteristics of iamitives cross-linguistically are “the notion of a “new situation” that holds after a transition” and “the consequences that this situation has at reference time for the

¹¹The verb *yak* ‘walk’ is deponent and employs the valency changing prefix *a-* without a change in the valency of the verb. Note that this occurs only with the venitive marker, in which case the verb means ‘come’, not when it is neutral (‘walk’) or marked with the andative (‘go away’).

participants in the speech event” (2013: 43). The former was described above as event completion, and the latter as current relevance. In fact, the iamitive particle is the main way to express event completion in Komnzo, because the perfective aspect does not explicitly set this boundary on an event.

There has been much discussion in the literature about the paths of grammaticalisation of perfects, for example in Bybee & Dahl (1989). In Komnzo, the iamitive particle *z* is formally closest to the proximal series of the deictic markers, and one might speculate about these as a source of grammaticalisation (§3.1.12).

6.3.6 The habitual particle *nomai*

The habitual particle *nomai* typically combines with durative inflections. In example (49), the cockatoo always warns the protagonist of another man who comes and visits him.

- (49) *krara ymd suwägrm maf swatrikwrm nomai nima “oh, kabe yanyak.”*
 krara ymd su-wägr-m maf
 cockatoo bird 3SG.MASC.β1-be.on.top.ND-DUR who.ERG

 3SG.MASC:SBJ:NPST:IPFV:VENT/walk
 ‘The cockatoo bird used to sit on top (of the tree), and told him always: “Oh, a man is coming.”’
 [tci20100802 ABB #80-82]

The habitual can also combine with verb forms inflected for other TAM categories, such as imperfectives (50). It only occasionally occurs with perfectives, as in (51), where the event is negated. In both examples, *nomai* expresses an extended period of time rather than a repeated habit.

- (50) *yamnza yamnza ... nomai ... ysokwr tüfr.*

 [tci20131013-02 ABB #87]

6.4 Some remarks on the semantics of TAM

Following from our description of the morphology and combinatorics of TAM in Komzo, I want to sketch out a coherent picture of the semantics of these categories and their extended uses. Although tense, aspect and mood are intertwined, I will discuss them separately in the following sections.

6.4.1 Tense

We saw that Komnzo has three or four morphological tenses depending on the analysis: the non-past, the recent past and the past. The immediate past is expressed by a clitic and builds on a verb form inflected for the non-past. Future reference is expressed periphrastically with the particle *kwa*.

The temporal reference of the immediate past and the recent past overlaps. The immediate past is used for events that took place a short while prior to the time of speaking, and it may be used to put extra emphasis on that fact. The recent past covers the same period of time, but it reaches further back, usually to the preceding day. Example (52) is taken from a hunting story, at the end of which the speaker returns home to find one of his dogs. He tells his wife that this is the dog which had disturbed him at the outset of the trip when he was about to cross the Morehead river. He had pushed the dog into the water, whereupon the poor dog ran back to the house. The whole episode in (52) is set in the same time frame with respect to the moment of speech. Only the ‘pushing in the water’ is expressed in the immediate past, while the other two verb forms are in the recent past.¹²

- [illegible]

The bidirectional time adverbials discussed in §3.1.8 help to identify the appropriate time frames for each tense value. The term *kayé* expresses a moment in time which is removed by one day from the present time. Thus, *kayé* can mean ‘tomorrow’, when used

¹²The speaker uses the *nz=* formative of the immediate past clitic. As pointed out in §6.3.1, this formative is a borrowing from Wära. The Komnzo formative is *n=*.

with a non-past inflection, or it can mean ‘yesterday’, when used with a recent past. Events further back in time have to be expressed by the past tense. Likewise, one cannot use a recent past with the time adverbial *nama*, which indicates a point in time that is removed two days from the present time (‘day before yesterday’ or ‘day after tomorrow’). In short, the recent past reaches back one day, whereas the past tense covers everything before yesterday, irrespective of whether it happened a week ago or in ancestral time. Example (53) shows the use of *kayé* and the recent past. Example (54) shows the use of *nama* and the past tense.¹³

- (53) *kayé nzä boba zenfaré ... kanathr.*

 3SG.F:SBJ:PST:IPFV:VENT/go
 ‘The older sister Dayr who came here two days ago ...’ [tci20130901-04 RNA #87]

Tense values can be used with a pragmatic motivation. It is quite common to foreground events in a narrative by putting them into the non-past, even though the story is set in the recent past or the past. Example (55) comes from a story that took place in the speaker’s youth. In the example clauses, he describes walking with a friend during night time. The two boys rested along the way and smoked tobacco. Although the story is set in the past, only the first and the last verbs in (55) are inflected in the past tense (‘walk’ in both cases). The ‘sitting down’ and the ‘setting off’ are inflected for irrealis, and are thus tenseless. The rolling of the cigarettes and their smoking is told in the non-past, which moves this part to the foreground.

- (55) *nyana ttfö bä rä ... bäne ... sazäthi fä kramse sukufa eknne änane boba krafare ... zbär nzfyanm.*

[tci20210904-01 MAB #140-143]

Future reference can be expressed by irrealis or non-past inflections combined with the future particle *kwa*. The main difference between the two strategies seems to lie in the anticipated degree of certainty: the non-past inflection is usually used when the speaker is more certain that the event is going to take place.

6.4.2 Aspect

I have labelled the principal aspectual distinction in Komnzo imperfective versus perfective. Durative aspect is understood as a subtype of the imperfective and we could label these two as ‘basic imperfective’ and ‘durative imperfective’. I use the traditional labels imperfective and perfective, but I want to spell out the particular flavour that Komnzo gives to them.

Traditional accounts of perfectivity often take the completion of an event as a starting point (Frawley 1992: 296) or suggests that “perfectivity indicates the view of a situation as a single whole” (Comrie 1976: 16). In Komnzo, completion does not really play a role in the semantics of the perfective-imperfective distinction. The boundary set up by the perfective seems to concentrate more on the left edge, i.e. on the beginning of the event. Similar systems are found elsewhere in the Southern New Guinea region, for example in Marind (Drabbe 1955: 41), Nama (Siegel 2014) and Nen (Evans 2015b). In Komnzo, the main mechanism for expressing event completion, i.e. to set up a right edge event boundary, is the iamitive particle, which can occur with verb forms in perfective, imperfective and durative aspect (§6.3.5). It follows that imperfectivity does not entail that the event is open-ended. Example (56) is taken from a head hunting story. The quantifier *bramöwä* ‘all’ signals that the attack was full-scale and all inhabitants were killed, but the verb form in (56) is in the imperfective.

- (56) *watik ebar kabe ane fof thäthora fof... bramöwä ane fof efnzath*

2|3PL:SBJ>2|3PL:OBJ:PST:IPFV/hit

‘Then, the head hunter arrived. They killed all of them.’ [tci20131013-02 ABB #143-145]

Likewise, perfectives do not entail that an event is finished, but rather that it has started or that its duration was of a punctual quality. The latter is shown in the first verb ‘arrive’ in example (56). The former is shown in example (57), which is taken from a story

about a malignant being. At the end of the story this being tries to escape by entering a bird, but the villagers are quick to shoot down the bird. The entering event in (57) is expressed in the perfective, but the imminent particle *n* shows that the event has not started yet. Hence, completion of the entering event is not entailed, but excluded. Thus, a literal translation of *n zāthba* would be: ‘s/he was about to start to enter’.

- (57) *brbrnzo fof n zāthba bafen ... ymden fof.*

[tci20120901-01 MAK #193-194]

Aspect in Komnzo seems to concentrate more on a punctual/inceptive versus ongoing/stretched-out distinction. I adopt the traditional labels perfective for the former and imperfective for the latter. The degree to which an event is “stretched out” would then decide whether the speaker chooses the imperfective or durative aspect. The basic binary distinction is clearest in the imperative forms. The imperfective imperatives often encode an ongoing action and, depending on the context, they can be translated as “keep on X-ing” or “do X for some time”. Perfective imperatives, on the other hand, express inception “start X-ing” or punctuality “do X once/quickly”. In example (58), the speaker has just produced a toy bullroarer from a coconut leaf and shows me how to hold it properly. In (58a), she tells me not to hit anything while swinging, and the imperative of ‘hit’ is in the perfective.¹⁴ In (58b), she is already swinging the bullroarer, telling me to hold it away from the body. Consequently, all the imperative verb forms (‘hold’, ‘blow’, and ‘swing’) are in the imperfective.

A number of authors have used a scale-based approach to model certain operators which change the structure of predicates (Kennedy & McNally 2005 and Kubota 2010). Such an approach is compatible with the TAM system of Komnzo, once we accept that the imperfective versus perfective distinction highlights different parts of event by manipulating the temporal scale. Applied to the Komnzo TAM system, such a model portrays perfectives as a means to (i) set an explicit initial boundary and to (ii) limit the temporal scale of the event. (Basic) imperfectives leave this initial boundary implicit, but highlight that the event was carried out for some time – a little further along the scale. The durative (imperfective) increases the temporal scale of the event. As shown above, none of these (morphological) aspectual categories sets an explicit boundary at the right edge of the event. The function of event completion is reserved for the iami-tive particle. I will leave the theoretical modelling of the semantics of the Komnzo TAM system for future research.

The theoretical discussion of aspect has often focussed on the distinction between viewpoint aspect and situation aspect.¹⁵ Despite all terminological confusion, the former is often called ASPECT, a term which is employed for “different ways of viewing the internal constituency of a situation” (Comrie 1976: 3). Situation aspect, on the other hand, has often been called AKTIONSART, and is associated with the internal structure of the event. Thus, situation aspect is something objective about the nature of the event, whereas viewpoint aspect is subjectively manipulated by the speakers, or as Smith puts it: “the categories of viewpoint aspect are overt, whereas situation aspect is expressed in covert categories” (1997: 5). We have seen that this does not apply to Komnzo. Aspectual categories, although highly grammaticalised, are based on the situation type rather than on viewpoint, i.e. they are about inception/punctuality, iteration and duration rather than completion. The fact that aspect is highly grammaticalised means that the categories are accessible to virtually all verb lexemes. I showed in §5.3 that the two stem types (RS and EXT) are attested for almost all stems. This supports the argument that the notion of an objective internal event structure, which is fed into the inflectional system, plays little role in Komnzo.

As we have seen in the discussion of verbal morphology, a central part of the inflectional system are the two stem types. The labels EXT and RS of course refer to “extended in time” and “restricted in time”, respectively. All perfectives are built from the RS stem and all imperfectives are built from the EXT stem. However, a relabelling of the RS stem

¹⁵See Sasse (2002) for a formidable overview of the research on aspect.

as “perfective stem” and the EXT stem as “imperfective stem” would be misleading. For example, the RS stem is employed for iterative aspect, which is by definition not bounded in time. This contradiction can be resolved by assuming a more transparent contribution of the morphological mechanisms which participate in the iterative inflection. As shown in §6.2 (Table 6.1), the iterative builds on the RS stem, but it employs the β_1 or β_2 prefix series, which otherwise only occur with the EXT stem to build imperfectives and duratives. In other words, the iterative aspect limits the event structure by stem selection and simultaneously spreads out the event structure by the selection of the prefix series. This is an interesting scenario, which calls for further comparative research within the Yam languages to shed light on the grammaticalisation of iterative aspect.

6.4.3 Mood

There are three modal categories in Komnzo: indicative, imperative and irrealis. Further nuances can be expressed with the help of particles, especially the potential *kma*, the imminent *n* and the apprehensive *m* (§6.3). Here, I will only describe some of the ways in which two of the three basic categories – the imperative and the irrealis – deviate from their conventional definitions.

Imperatives can be used in a number of ways that fall outside the definition of ‘giving an order’. In example (59), the speaker showed me the leaves of a pandanus plant pointing out that I can use the leaves to sleep on. The imperative form *gnyaké* ‘you go’ is thus not a command ‘go without a mat’, but more like a conditional ‘if you go without a mat’. The conditional interpretation also comes from the word *fthé* which means ‘when’ or ‘at the time when’. This type of conditional construction is an extended use of the imperative inflection. Most imperatives are used as commands, and there are conditional constructions without imperative inflections.

- (59) *yamemäre fthé gnyaké ... etfthar.*

 2SG:SBJ:IMP:IPFV/walk

‘If you go without a mat, (this one is) for sleeping.’

[tci20130907-02 JAA #546-547]

As we have seen in §6.2.2, the irrealis is marked by the prefix *ra-*. There is no realis marker, hence no realis inflection. Beyond counterfactuality and futurity, the irrealis mood has a number of semantic extensions in Komnzo. Cross-linguistically irrealis mood is employed for a wide range of functions, which has led some authors to challenge its validity as a comparative category (Bybee et al. 1994). Others have suggested a prototype approach to irrealis mood, for example Givon (1994: 327). I will adopt the latter here. Example (60) and (61) show the irrealis mood in its more central functions, counterfactuality and futurity, respectively. Examples (60) is taken from a headhunting story which involved the speaker’s father.¹⁶ Example (61) is taken from a procedural in which the speaker shows me how to make a toy from a coconut leaf.

¹⁶The example also shows the ‘relative use’ of the immediate past. Although the events in the story happened

[tci20120914 RNA #41]

Verbs inflected for irrealis can be used as habituals. This use, especially with past habituals, has been noticed in a cross-linguistic study by Cristofaro (2004). Example (62) comes from a procedural about poison-root fishing, which is a common activity during the dry season when the water recedes. The speaker talks about the preparations and the process of poison-root fishing, while his family is busy fishing in the background. All verb forms are in the irrealis mood.

[tci20110813-09 DAK #22-23]

Irrealis mood is frequently used in narratives which report factual truths. Foley (2000: 389) points out that Papuan languages often employ the realis-irrealis distinction for

a long time ago, the speaker uses the immediate past (*niyamnzrm* ‘He was staying just before’) to emphasise that the headhunt took place just after his father had left the village.

pragmatic purposes. In Komnzo, the pragmatic use comes from the alternation between irrealis and realis inflections especially in event sequencing. In this pattern, the irrealis is used for backgrounding. Example (63) is taken from a hunting story that occurred many years ago. The story is told from a first-person perspective, thus, there is no reason to question the factual truth of what is being told. The clauses in (63) describe a sequence of events: fall asleep > be sleeping > wake up. Only the foregrounded clause ('sleep') is expressed in realis (past durative), whereas the backgrounded clauses ('fall asleep' and 'wake up') are expressed in irrealis (perfective). In that sense, the irrealis verb forms act as a backgrounding bracket around the foregrounded clause.¹⁷

- (63) *krämnreré efoth etfth kwofrugrm e zizi ... krebnafé.*
 k-rä-mnrer-é efoth etfth kwof-rugr-m e
 M.β-IRR.VC.ND-fall.asleep.RS-1SG sun sleep 1SG.β2-sleep.EXT.ND-DUR until

 zizi (.) k-rä-bnaf-é
 afternoon (.) M.β-IRR.VC.ND-wake.up.RS-1SG
 1SG:SBJ:IRR:PFV/wake.up
 ‘I fell asleep (for) a daytime nap. I was sleeping until the late afternoon ... and I
 woke up.’ [tci20111119-03 ABB #31-32]

The interaction of TAM categories with information structure was described by Hopper (1979). Hartzler describes a similar function of the irrealis mood in Sentani (1983). I defer the discussion of this topic to §10.5, where a detailed analysis is offered, drawing on a longer text segment.

¹⁷Note that example (55) on page 260 employs the same bracket-like use of the irrealis inflected verb forms. The only difference is that in (55), the foregrounded event is in the non-past, whereas in (63) the foregrounded event is in past durative.

A grammar of Komnzo

Komnzo is a Papuan language of Southern New Guinea spoken by around 250 people in the village of Rouku. Komnzo belongs to the Tonda subgroup of the Yam language family, which is also known as the Morehead Upper-Maró group. This grammar provides the first comprehensive description of a Yam language. It is based on 16 months of fieldwork. The primary source of data is a text corpus of around 12 hours recorded and transcribed between 2010 and 2015.

Komnzo provides many fields of future research, but the most interesting aspect of its structure lies in the verb morphology, to which the two largest chapters of the grammar are dedicated. Komnzo verbs may index up to two arguments showing agreement in person, number and gender. Verbs encode 18 TAM categories, valency, directionality and deictic status. Morphological complexity lies not only in the amount of categories that verbs may express, but also in the way these are encoded. Komnzo verbs exhibit what may be called ‘distributed exponence’, i.e. single morphemes are underspecified for a particular grammatical category. Therefore, morphological material from different sites has to be integrated first, and only after this integration can one arrive at a particular grammatical category.

The descriptive approach in this grammar is theory-informed rather than theory-driven. Comparison to other Yam languages and diachronic developments are taken into account whenever it seems helpful.
